Daisy Data Displays Launches a Streamlined Solution for Ruggedized Multi-Server Management in Military Environments

Mechanicsburg, PA, (February 2022) – Daisy Data Displays, Inc., an industrial and ruggedized computer manufacturer based in Mechanicsburg, PA, has brought to market the Rugged 1U Rackmount Monitor & Keyboard Drawer. This modular rack console offers a space-saving, streamlined approach to managing and monitoring Military data centers and industrial servers – where reliability and efficiency are critical.

The new 2445 Series integrates a monitor, keyboard, pointing device and KVMs in a single 1U high 19" rack unit. Elegantly folding down and storing in just 1U of height, operators can easily manage multiple servers from a single workstation, with its optional integrated 4-port KVM switch.

With a NEMA 12 rugged aluminum constructed enclosure, the 2445 Series is designed to withstand shock, vibration, high humidity and salt fog. The industrial constructed drawer is easy to install and slides easily in and out of any 19" rack. Access controls smoothly with its hula-pointing device and elastomer keyboard, even with gloved hands. The integrated 17.3" High-definition LCD monitor features 1920x1080 resolution and optional 1000 nits brightness.

“Daisy has built custom solutions for the Military for over 40 years and has a deep understanding of how to design products based on our customers’ specific needs,” said David (Avi) Shefet, President of Daisy Data Displays. “Many of our customers expressed a need to us for a ruggedized, but streamlined solution to monitor and manage multiple servers in Military and industrial environments. We found that a gap existed in the marketplace to address this problem and that we have the exact expertise to solve it. So, we combined our customer-driven approach with our technical experience to develop the 2445 Series and we are now proud to introduce it to the market.”
